

Semantic extraction audit

Product: **consumer_loan**

Model: **gemini-3.7-flash**

Before Gemini extraction, a deterministic extraction planner groups requested fields (for example rates, fees, or eligibility), ranks accepted evidence by its source-discovery role, keywords, and authority precedence, and enforces configured item/character limits. It does not decide whether a tariff value is true and it does not use an LLM.

NOT SENT TO SEMANTIC LLM therefore means the evidence was accepted by source discovery but was not included in any bounded field packet after that deterministic ranking and size/count limiting. It was not rejected as false or irrelevant.

In the document overlays below, only exact quotations cited by successful `found` results are highlighted. Text that was inspected but not cited remains visually unchanged.
